Horner Lighting Group Launches LED Remote Phosphor Linear Line

INDIANAPOLIS (11-14-13) – Horner Lighting Group is proud to announce the launch of its new high output LED Remote Phosphor Linear line. This new line features a variety of options for indoor areas including high/medium/low bay and aisle lighting applications and is a first within the lighting industry.

“We are excited to introduce a new Generation of Solid State Lighting (SSL.) LED’s have recently moved into the main stream within the lighting world and early adopters of this technology will reap the benefits. A number of lighting companies are trying to match legacy systems for the purposes of compatibility, but at Horner Lighting Group, we are focused on giving more to the customer by reducing his or her future cost of power and maintenance labor. We will continue to focus on enhancements and improvements to LED lighting for our customers,” said Phil Horner, CEO, Horner Lighting Group.

The new Horner LED Remote Phosphor Linear line saves on installation time, product replacement life span, and enhances the work environment with a variety of CRI options. With a sleek design, a variety of options, and unparalleled light quality, Horner Lighting Group is striving to raise the bar for customer interior lighting needs with this cost effective solution. This advanced lighting fixture uses tubular extrusions of phosphor to create linear arrays of light that have 2 to 4 times higher output and 2 to 4 times higher efficacy than florescent or metal halide lighting. These new fixtures excel at lighting industrial, warehouse, retail spaces and more.

“The future in SSL is incredible as traditional materials will be abandoned to thermal plastics and films to improve the lighting experience and efficiencies. At Horner Lighting Group, we plan to lead the way in these advancements and are excited to be launching our innovative LED Remote Phosphor Linear line as a first step in this path,” said Horner.

About Horner Lighting Group

Horner Lighting Group, a divisions of Horner APG, LLC, specializes in sustainable lighting technologies and energy efficient solutions. By developing a sustainable lighting system based on remote phosphor technology, Horner’s lighting products create more lumen output without the costs of other previously used industrial products. Horner Lighting Group was honored as a 2013 Next Generation Luminaires™ Department of Energy (DOE) Award recipient.

Additional product, company information, as well as information on remote phosphor technology can be found at <http://www.hornerlighting.com>.
